Experiment : 1

Aim :- Design an ER diagram for an indian e commerce platform with entities Customer, Product, Order, Orderitem, Seller, Category, Payment, Delivery, Address, Specify primary keys, composite and multi-valued attributes, weak entities, specialization of Product and participation constraints.

Output :-

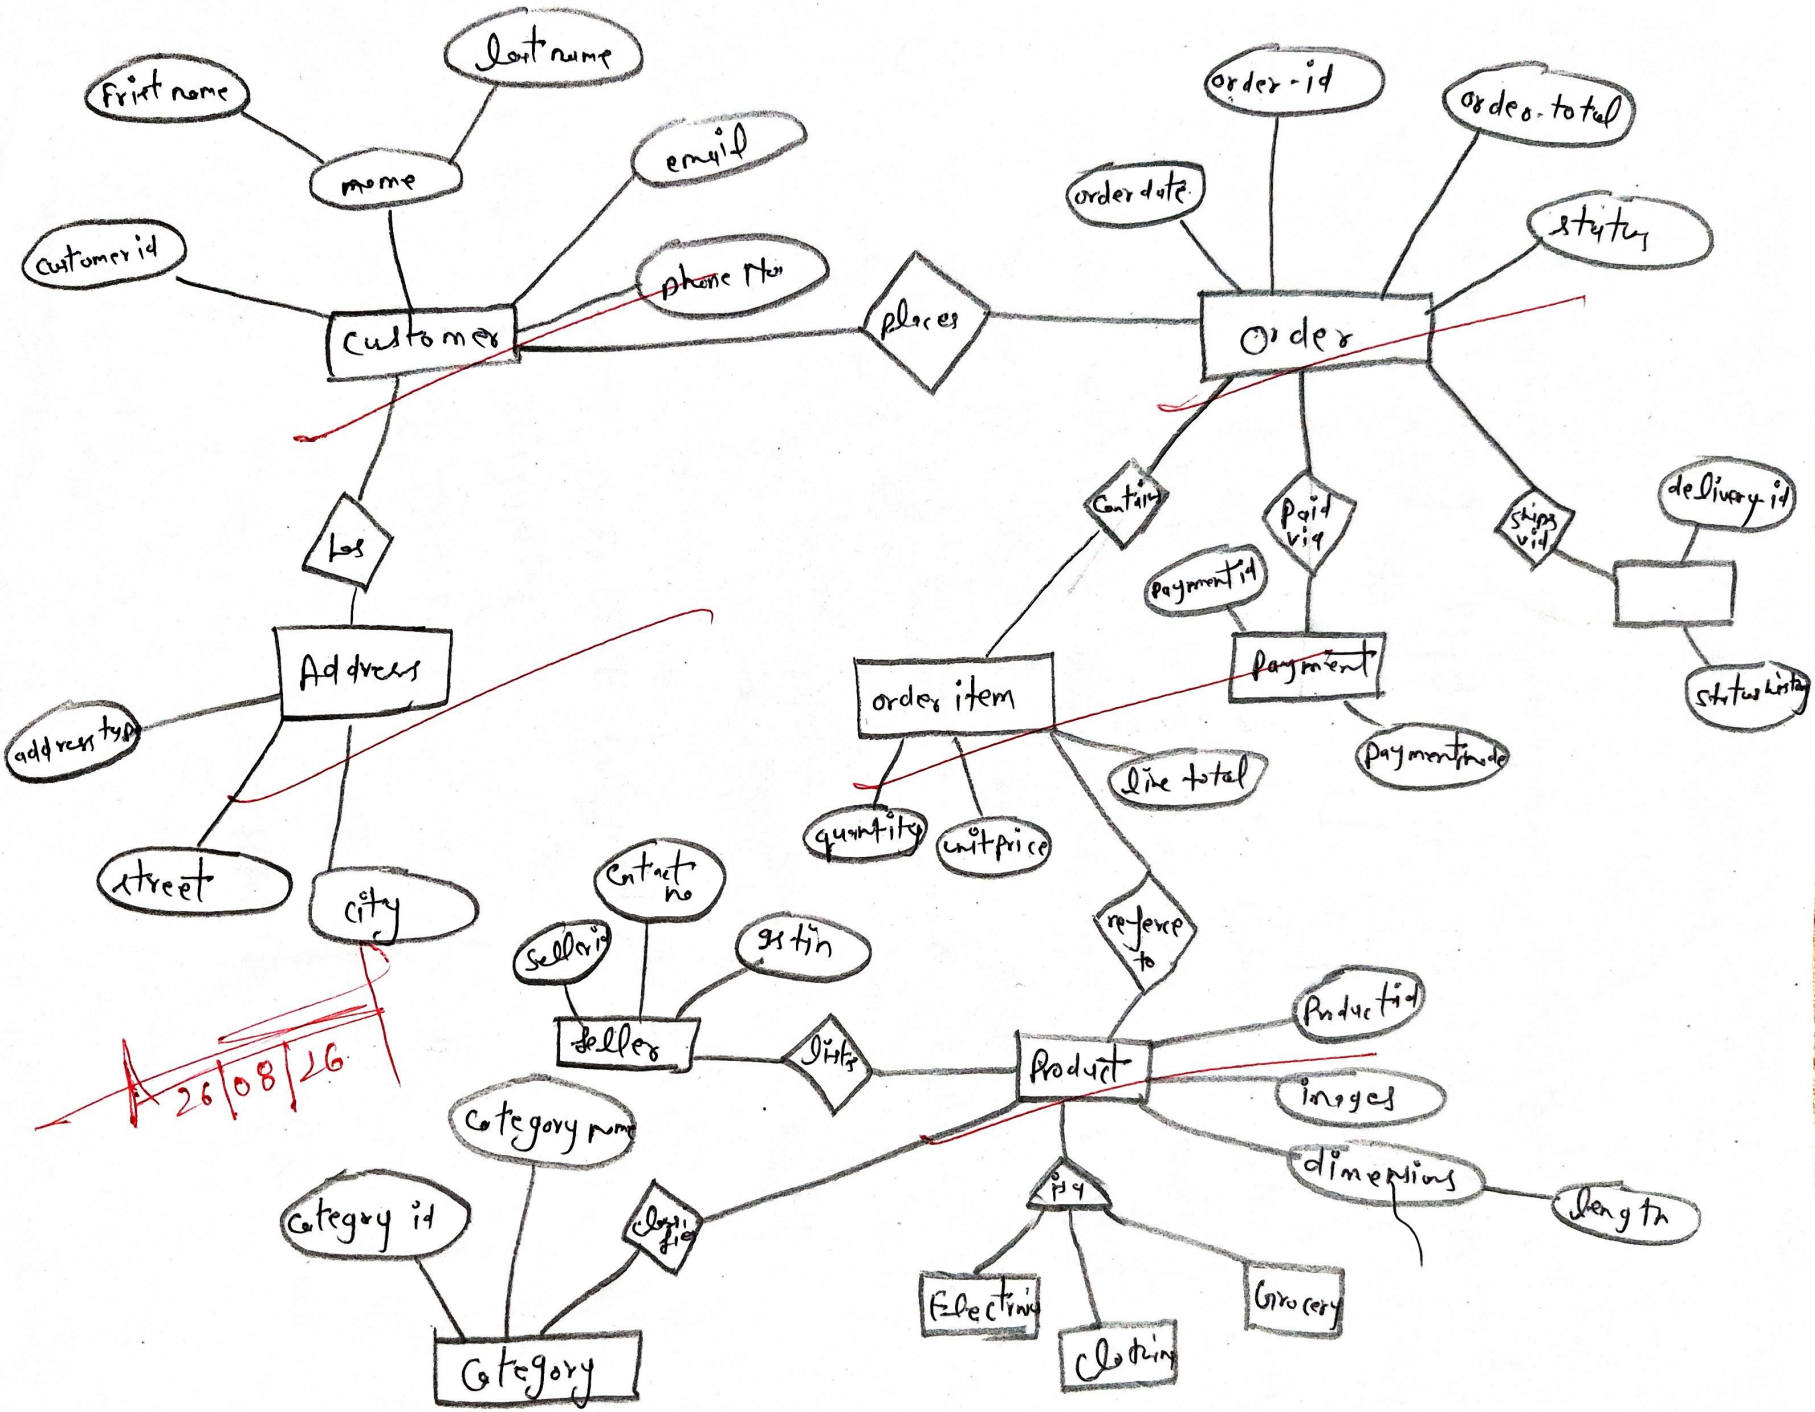

1. The required entities of the e-commerce system were represented including Customer, Product, Order, Orderitem, Seller, Category, Payment, Delivery and Address.

2. The relevant relationship among the entities were established to represent the working of the e-commerce platform.

3. The ER diagram was constructed with primary keys, Composite attributes, multivalued attributes, weak entities and the specialization of the product entity.

4. Suitable cardinality ratio and participation constraints were represented for the relationship between the entities.

ER DIAGRAM :-
